

Can automation help your health program grow?

We are moving government forward with smarter solutions for
Health Technology

Challenge

Populations are growing.
Public health budgets aren't.
Jurisdictions struggle with:

- Aging IT infrastructure
- Manual claims adjudication
- Disconnected data & systems

Solution

Medigent modules are configurable and scalable for jurisdictions of all sizes, to support:

- Eligibility & Enrolment
- Claims & Payment Processing
- Drug Information Systems ePrescribing

Benefits

Transform health care administration to achieve better outcomes and value.

- +95% claims automation
- Continuous innovation
- Complete view of beneficiary journey

As the market-leading health administration solution, Medigent enables you to focus on health care delivery, rather than infrastructure.

With a connected view of the beneficiary journey, detailed analytics, and KPIs, you're empowered to make evidence-based decisions that power patient outcomes and ROI.

Is your public health data ready for the future?

Maximus and Medigent meet tomorrow's demands for public health programs.

Case Study | Improving Patient Safety

WHAT |

Before deploying Medigent, each health care provider in PEI managed its own medication records. Pharmacists, physicians and other prescribers had no visibility into what other drugs patients were taking.

HOW |

Maximus deployed the Medigent Drug Information System to provide complete medication profiles through a connected database, and to flag potentially harmful interactions with other medications, allergies, and immunizations.

NOW |

Today, PEI providers have full insight into medication records with Medigent.

WOW |

Patients are protected from harmful drug interactions, reactions, and errors.

Why Medigent?

The Medigent Claims Management and Drug Information System is a secure, SaaS based automation solution designed and developed by Maximus Canada to support and scale to meet the growing demands of public health systems.

As public sector healthcare organizations navigate mounting pressures, from capacity constraints to evolving patient needs, automation offers a transformative path forward.
